

## True DBGrid® Pro 7.0

The World's Most Popular Grid Control for Microsoft® Visual Studio®

### True DBGrid Pro 7.0

True DBGrid Pro 7.0, a data-aware ActiveX® component for Microsoft® Visual Studio®, is the upgrade to the DBGrid control included in VS and earlier versions of Microsoft Visual Basic® and Visual C++®.

True DBGrid Pro 7.0 makes it easy to browse, edit, add, delete, and manipulate tabular data. Using the latest data binding technologies built into VS, including OLE DB, True DBGrid Pro 7.0 completely manages the database interface, allowing developers to concentrate on other application-specific projects.

### You Wanted It - You Got It

You gave us your wish list, and we made it come true! True DBGrid Pro 7.0 combines all of the functionality you know and love with the additional features you've asked for, making it the most robust, powerful, and feature-rich grid we've ever developed.

New features include:

- ❑ **Enhanced Master-Detail presentation with fully editable, dropdown hierarchical views** allows you to view child data records from within the master table with a click of the mouse.
- ❑ **Excel-style cell selection** lets you choose not only any row or column, but now any range of cells.
- ❑ **Rich scrolling capabilities** permit you to track the location of the scroll bar and give users an informational pop-up as the scroll bar moves.
- ❑ **Additional display modes** present data in useful formats: Form View repositions data in a standard "form" that can be modified as needed, and Inverted View repositions rows as columns to provide a convenient "read down" format.
- ❑ **Customizable row and column borders** let you alter the appearance of a cell by creating a border.

❑ **Tag property** allows you to attach any type of object to a column.

❑ **Even better keyboard navigation** lets you control the relative position of the next cell, using the DirectionAfterEnter property, when users press the Enter key.

❑ **More print options**, such as additional zoom and print preview capabilities, give you full control over printing.

❑ **Bi-directional language support** provides support for both right-to-left and left-to-right languages.

❑ **FilterBar data entry row** lets you implement custom end-user operations, such as incremental search and recordset filtering.

❑ **Native integration with True DataControl™** adds powerful data access and manipulation capabilities.

❑ **Additional 3D effects** allow mouse-over elements to acquire a 3D appearance.

❑ **AutoDropDown and AutoCompletion properties** simplify data entry by reducing the number of keystrokes needed for dropdown selection.

❑ **Automatic column sizing (Spring Mode)** keeps your data viewable by resizing columns proportionally whenever the grid is resized horizontally.

❑ **Support for Windows® 2000 COM Redirection** gives you the ability to certify your application for Windows 2000.

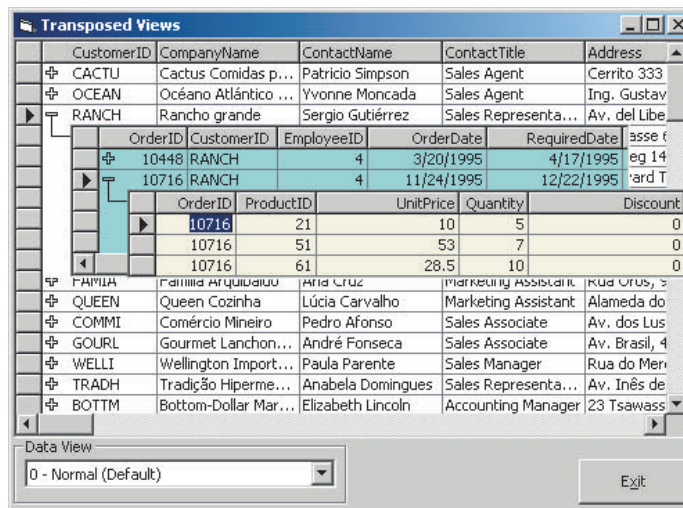

❑ **Expanded Styles** let you customize the row and column borders using new appearance, size, color, and type properties.

❑ **Automatic grid cell translation to True DBDropDown values** allows you to connect a TDBDropDown control to a table containing a value and representation. The dropdown will automatically map the representation to the value.

True DBGrid Pro 7.0 combines all the functionality you expect with the additional features you've asked for, making it the most robust, powerful, and feature-rich grid we've ever developed.
